Acheeva[®] LS[®]

learning station

The Acheeva[®] Learning Station's compact design means that students with complex and continuing healthcare needs can be easily included in classroom activities.

A multi-positional learning station that enables pupils to learn to lie straight and work in a supported, balanced posture to maximise function.

Working height & angle are easily adjusted so children can make eye contact and communicate. A good working height is obviously kinder on teaching and support staff!

Being off the floor protects vulnerable children and allows them to be involved safely in more activities.

Join in the rough and tumble of an *ordinary life*

The Acheeva[®] provides full support in supine, prone or side lying to protect body shape and respiratory function.

Powered Height adjustment facilitates sliding or standing transfer. Moving from class to bathroom can also be easily achieved with less disruption than a hoist.
